Parking Stall Availability Data and Analysis Lansdowne and Interurban (2007-2010)

BACKGROUND: Robbins Parking completes a survey of the number of available parking spots at both Camosun College Campuses over two weeks at the end of October. The end of October is the busiest time of year in Camosun College parking lots. The following is an overview of the analyzed data for 2007 to 2010.

INFORMATION: ‘Lowest Point of Day’ refers to the time of day in which the parking availability is at its lowest. ‘Spots’ refers the actual number of spots available during this time of day. ‘ % Low point’ is the percent of total spots that are available during this lowest point. The ‘Low Point Ave/Year’ refers to the lowest point percentage averaged for the two survey times per year. This Low Point Average/Year number is what is represented in the graph on the following page. The same analysis was done for high availability times, such as the ‘Highest Point of Day’, which refers to the time of day in which parking availability was at its highest.
